BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2011 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

List PWS ID #s for all Water Systems Covered by this CCR

MOCKINGBIRD TRAILER PARK Public Water Supply Name

confide	deral Safe Drinking Water Act requires each <i>community</i> public water system to develop and distribute a consumer nece report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.
Please.	Answer the Following Questions Regarding the Consumer Confidence Report
	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
	 □ Advertisement in local paper □ On water bills □ Other
	Date customers were informed://
X	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods: Date Mailed/Distributed:
	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
	Name of Newspaper:
	Date Published://
	CCR was posted in public places. (Attach list of locations)
	Date Posted: / /
	CCR was posted on a publicly accessible internet site at the address: www
CERT	<u>FICATION</u>
the forr	y certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in and manner identified above. I further certify that the information included in this CCR is true and correct and is not with the water quality monitoring data provided to the public water system officials by the Mississippi State nent of Health, Bureau of Public Water Supply.
Name1	Title (Prøsident, Mayor, Owner, etc.)
	Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

2011 Drinking Water Quality Report Mockingbird Trailer Park PWS 0300050

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water comes from the Undifferentiated Terrace Aquifer.

Source water assessment and its availability

The risk assessment for our water supply is listed as higher due to insufficient data. This report is available for reading in the office.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

How can I get involved?

If you have any questions concerning your drinking water, please contact Clay Johnson at 228.875.2222.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisims that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Monitoring and reporting of compliance data violations

A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING

In accordance with the Radionuclides Rule, all community public water suppliers were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 601.576.7518.

Your water system was out of compliance due to not sampling for radionuclides for the period of 1/1/11 to 6/30/11. The required samples were taken and reported on 9/27/11 and 12/08/11.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Mockingbird Trailer Park is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG	MCL,					* .	-		
	or	TT, or	Your	Ra	nge	Sample				
Contaminants	MRDLG	<u>MRDL</u>	Water	Low	<u>High</u>	<u>Date</u>	<u>Violation</u>	Typical Source		
Disinfectants & Disinfectant By-Products										
(There is convincing	evidence th	at additio	n of a dis	sinfect	ant is n	ecessary	for control o	f microbial contaminants)		
Chlorine (as Cl2) (ppm)	4	4	1.2	0.6	1.2	2011	No	Water additive used to control microbes		
TTHMs [Total Trihalomethanes] (ppb)	NA	80	4.7	NA		2008	No	By-product of drinking water disinfection		

Contaminants	MCLG	AL	Water	<u>Da</u> 1	<u>te</u>	<u>Ex</u>	ceeding .	<u>AL</u>	AL		Typical Source
			Your	Sam	ple	ħ	# Sample	es	Excee	ds	
226/228) (pCi/L) Uranium (ug/L)	0	30	0.067	0.067	0.06	57	2011		No E		osion of natural deposits
Radium (combined	0	5	0.834	0.497	0.83	34	2011	No		╁	osion of natural deposits
Alpha emitters (pCi/L)	0	15	2.93	2.77	2.9	3	2011		No	Er	osion of natural deposits
Radioactive Contam	inants			i	· · · · · · ·					1	
Thallium (ppb)	0.5	2	0.5	NA			2009	No		Le	scharge from electronics, glass, and eaching from ore-processing sites; drug ctories
Selenium (ppb)	50	50	0.5	NA			2009		No	re	scharge from petroleum and metal fineries; Erosion of natural deposits; scharge from mines
Mercury [Inorganic] (ppb)	2	2	0.2	NA			2009		No	fro	osion of natural deposits; Discharge om refineries and factories; Runoff from adfills; Runoff from cropland
Chromium (ppb)	100	100	0.53	NA.			2009	2009			ischarge from steel and pulp mills; osion of natural deposits
Cadmium (ppb)	5	5	0.1	NA			2009		No	na re	orrosion of galvanized pipes; Erosion of tural deposits; Discharge from metal fineries; runoff from waste batteries and ints
Beryllium (ppb)	4	4	0.1	NA			2009		No	co ele	ischarge from metal refineries and val-burning factories; Discharge from ectrical, aerospace, and defense dustries
Arsenic (ppb)	0	10	0.582	NA			2009		No	or	rosion of natural deposits; Runoff from chards; Runoff from glass and ectronics production wastes
Antimony (ppb)	6	6	0.5	NA			2009		No	re	ischarge from petroleum refineries; fire tardants; ceramics; electronics; solder; st addition.
Nitrite [measured as Nitrogen] (ppm)	1	1	0.02	NA	A		2011		Ño	se	unoff from fertilizer use; Leaching from ptic tanks, sewage; Erosion of natural posits
Nitrate [measured as Nitrogen] (ppm)	10	10	0.08	NA			2011		No	se	unoff from fertilizer use; Leaching from ptic tanks, sewage; Erosion of natural eposits
Fluoride (ppm)	4	4	0.425	NA			2009		No	w	rosion of natural deposits; Water additive hich promotes strong teeth; Discharge om fertilizer and aluminum factories
Barium (ppm)	2	2	0.00183	NA			2009		No	fire	ischarge of drilling wastes; Discharge om metal refineries; Erosion of natural eposits

Inorganic Contaminants									
Copper - action level at consumer taps (ppm)	1.3	1.3	0.0126	2008	0	No	Corrosion of household plumbing systems; Erosion of natural deposits		
Lead - action level at consumer taps (ppb)	0	15	1.2	2008	0	No	Corrosion of household plumbing systems; Erosion of natural deposits		

Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

	MCLG or	MCL or	Your		
<u>Contaminants</u>	MRDLG	MRDL	<u>Water</u>	<u>Violation</u>	Typical Source
Haloacetic Acids (HAA5) (ppb)	NA	60	ND	No	By-product of drinking water chlorination

nit Descriptions							
Term	Definition						
ug/L	ug/L: Number of micrograms of substance in one liter of water						
ppm	ppm: parts per million, or milligrams per liter (mg/L)						
ppb	ppb: parts per billion, or micrograms per liter (μg/L)						
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)						
NA	NA: not applicable						
ND	ND: Not detected						
NR	NR: Monitoring not required, but recommended.						

Important Drinking Water Definitions	
Term	MCLG: Maximum Contaminant Level Goal. The level of a contaminant in drinking
MCLG	water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
